2017 21.8007 Cover image: The photo shows a clock-wise 90° rotation of a cross-stratified Navajo Sandstone at a location known as "The Wave". The wave outcrops in Coyote Buttes North, part of the Paria Canyon/Vermillion Cliffs wilderness on the borders of utah and Arizona in the USA. The rocks are coloured red by iron oxide which picks out subtle changes in grainsize due to deposition on desert sand dunes that were active in the Jurassic. The large scale sets of cross-strata in the navajo Sandstone have been sculpted by wind and water to create the flowing shapes of the wave. *Geological Society, Journal* (London), 174(5) (September): cover, inside front cover.

Bross, William

1881 21.5724 Canyons. Their character and origin—Paper read before the American Association for the Advancement of Science, by the Hon. William Bross, of Chicago. *Chicago Daily Tribune*, (August 25): 3. [*NOTE*: Bross's paper was published by title only in the AAAS *Proceedings* (Bross, 1882, ITEM NO. 21.5723). The text published here includes a concluding paragraph pertaining to a presentation at the AAAS meeting by Clarence E. Dutton on the Grand Canyon (Dutton, 1882, ITEM NO. 21.916). Although published in a newspaper, this paragraph from Bross is reproduced in full here because his commentary (with his own interpretations, however) is the only published source for the text of Bross's paper. Bross writes: "Let me add a very few words in conclusion upon a paper on the geologic history of the Colorado River and the plateau of it, read at the St. Louis meeting by Col. E. C. Dutton [*sic*], of Washington. This canon, as described by Maj. Powell who has the honor of braving almost incredible dangers to explore it and to give the world their first knowledge of its wonders, is some 1,500 miles long; the perpendicular walls are a mile or a fraction of it apart, and are from 1,000 to 5,000 feet high. They are composed of nearly all the series in the geologic catalog, from the granit [*sic*] all the way up to the highest igneous stratified rocks. Now this, by far the longest and in some respects the most wonderful cañon in the world, Col. Dutton described as having been worn down by the Colorado River. In view of the facts herein presented that conclusion seems supremely fanciful and absurd. Like all the others, it could only have been formed by some great convulsion of the earth's crust, and through it the drainage of nearly a thousand miles along the western slopes of the Rocky Mountains finds its way to the Gulf of California."]

1882 21.5723 Canons as I have seen them, with some thoughts as to their origin [TITLE ONLY]. *From:* Titles of other papers read in Section B. *In: Proceedings of the American Association* *for the Advancement of Science, Thirtieth Meeting, held at Cincinnati, Ohio, August, 1891.* Salem, Massachusetts: The Permanent Secretary [of American Association for the Advancement of Science], p. 256. ("Printed in full in Chicago Tribune of Aug. 25, 1881." [*i.e.*, Bross, 1881, ITEM NO. 21.5724].)

1938 21.5736 A review of the geology of the Clovis finds reported by Howard and Cotter. *American Antiquity*, 4(2) (October): 113-130. [See pp. 122-123, an uncredited statement: ". . . it is now thought that the Brazos [River] of Texas once drained the area above the Grand Canyon now drained by the Colorado. When the Colorado diverted this water from the Gulf of the Pacific at about a net mile lower elevation [*sic*], it was the waters from the full-functioning drainage system which gave it the sudden load of headwaters necessary to dig the Grand Canyon. An encroaching stream, feeling for its headwaters in driblets, could not be expected to do such a thorough job at digging on bottom." (ENTIRE NOTE)]

1959 21.8108 Big rock falls. *The Supai News*, (March 16): 1. ["Several people reported seeing a huge rock slide on March 9th. From here in the Valley it looks like a lot of Manakaja Point came loose and crashed down hundreds and hundreds of feet. The noise was so loud everyone thought a Jet was 'buzzing' Supai again. The dust came in through the little canyons above Joe Jones' house. A wedge-shaped chimney fell up there and must have fallen over 1,500 feet." (ENTIRE ITEM)]

1959 21.8109 Earth shakes in Supai. *The Supai News*, (July 24): 1. ["Tuesday morning about 10:40 A. M. we were all surprised to feel the earth shake and our houses rock back and forth! One man said he was sitting in a chair reading when all of a sudden it began to move and at first he thought it was his dog underneath moving around. A lady working in her garden felt the earth shake and she said a piece of river bank fell in the water. Another chimney fell from Manakaja Point as a result of this earthquake. A visitor here said it felt like some of the San Francisco earthquakes and he considered it a fairly sharp one. This is not the first time for Supai as some of the old timers say they have felt them before down here. We are glad no rocks fell on any of us!" (ENTIRE ITEM)]

---

[88] *NOTE* regarding *Story of the Grand Canyon of Arizona* (Darton, 1917-1987): *Editions and variants of this title are cited separately herein. Bibliographical information about variants, with special reference to points, appears in* Appendix III to this bibliography. First ed. September 1917. Some later editions were only reprintings, while others were actual revisions and enlargements, with or without cover variants, imprint variants, pagination changes, and format changes. The edition last seen for the present bibliography is the 50th ed. (1987). This title holds the longest documented record for a Grand Canyon-Colorado River title *continuously in print*, at least 71 years, 1917-1987. How much longer beyond 1987 that the 50th Darton edition was available is not known.

1912 21.728 Some features in the Grand Canyon of the Colorado River. *Geological Society of America, Bulletin,* 23: 731.

1885 21.7711 Tertiary history of the Grand Cañon district : with atlas. *48th U.S. Congress, 2nd Session, House of Representatives Miscellaneous Document 35*, 264 pp. [text, quarto]; *Atlas*, 24 sheets [folded, laid loose in three-quarter leather folder with cloth ties affixed to boards on three open edges, and spine labels affixed; quarto]. (House series title-page accompanies text volume: *The Miscellaneous Documents of the House of Representatives for the Second Session of the Forty-eighth Congress, 1884-’85. In seventeen volumes. Volume 11.—No. 35. Washington: Government Printing*

Office. 1885.) (SPINE TITLE FOR TEXT VOLUME: [top] "HOUSE MISCELLANEOUS DOCUMENTS 2D SESS., 48TH CONG. 1884-'85 VOL. 11"; [bottom] "DUTTON [rule] TERTIARY HISTORY OF THE GRAND CANON DISTRICT [rule] WITH ATLAS". SPINE TITLE FOR ATLAS: [top] "HOUSE MISCELLANEOUS DOCUMENTS 2d SESS., 48th CONG. 1884-'85 VOL. 11"; [bottom] "ATLAS".) • [A re-release of Dutton (1882, ITEM NO. 21.918), as a part of the collated series of House Miscellaneous Documents for 1884-1885, not mentioned by Farquhar or in earlier editions of this bibliography. Text and Atlas title-pages are the same as for Dutton (1882), retaining date, but text volume adds the House Miscellaneous Documents series title-page (1885) cited above; atlas does not include a separate House Miscellaneous Documents title-page although it is identifiable from its spine labels. Atlas Sheets differ from 1882 publication in that the double-folio sheets are vertically and horizontally folded to accommodate quarto format (vertical fold in center as in original double-folio state, then folded horizontally to achieve quarto size). Quarto format also corroborated in *Checklist of Public Documents, Second Edition* (U.S. Government Printing Office, Superintendent of Documents, 1895, ITEM NO. 2.27756), p. 76. *Folded* Atlas Sheets each are also stamped with a numeral on the exterior (sheet verso) corner, enumerated 0 to 23, to facilitate identification of Atlas Sheets without having to unfold them: "0" is the title-page, "1" is the "List of Atlas Sheets" (equivalent to Atlas Sheet I), followed by 2-23 (Atlas Sheets II-XXIII, comprising tinted and chromo-lithographic maps and scenic views). Atlas title-page: *Department of the Interior United States Geological Survey J.W.Powell Director Atlas to Accompany the Monograph on the Tertiary History of the Grand Cañon District by Capt. Clarence E. Dutton U.S.A. [vignette] Washington 1882 Julius Bien and Co. Lith. New York*.] [Points relating to physical arrangement are provided with the assistance of Daniel F. Cassidy and Richard D. Quartaroli.]

1859 21.5511 *The gold regions of Kansas and Nebraska. Being a complete history of the first year's mining operations. Also, geographical, climatological, and statistical description of the great Northwest, showing an unoccupied territory of over one million square miles of rich country. Being a complete guide to the gold mines. By W. B. Horner.* Chicago: W. B. Horner (Wm. H. Tobey and Co., Printers, Chicago), 67 pp., map, advertisements. [Cover title: *Horner's Kansas and Nebraska gold regions, and new* *rail road and route map, to the gold mines. Published by W. B. Horner . . . .*] [See in Chapter 5, "Will Gold Be Found in the Mountains?"; p. 40, Colorado River and "Canon of the Colorado" noticed: "Moreover, the Colorado river, in escaping to the sea, pierces the Cordillera of the Andes diagonally, having rent its way by a chasm bored through the very bowels of the Cordillera, athwart from base to base. This chasm, four hundred miles in length, is known as the Canon of the Colorado. This canon presents the unique and novel fact to mankind, that a primary mountain chain whose summit is of the auriferous rocks, is thus gorged to its foundations, many thousand feet in depth! It is here upon the plateau, in the arcana of the mountain formation, and the activity of the stupendous forges of nature, that the precious metals may be sought to mass and position." (ENTIRE NOTE)]

1918 21.6212 Lacustral record of past climates. *Monthly Weather Review*, 46(6) (June): 277-280. [See p. 279: ". . . the Green River, reinforced by the Grand and other large eastern tributaries, was sufficiently powerful to hold its own against all vicissitudes and to carve through the rapidly bulging Colorado dome a Titan among chasms. Blocked by such a formidable rampart, the Old Virgen River, as it may be called, spread out far and wide over the adjoining intermontane plains, and rivaled in magnitude the Laurentide Great Lakes, with 20,000 square mlies of area and a depth of 1,000 feet. Finally, the principal supplies being diverted, the waters of the great lake were allowed to evaporate until equilibrium was again established between it and its remaining tributaries." And, "The elevation of the southern mountain barrier of the old valley was manifestly coeval with the formation of the inner gorge of the Grand Canyon of the Colorado River in Arizona—Mid or Late Tertiary in date."]

1922 21.5840 The return of an American Geologist. *Pan-American Geologist*, 37(1) (February): 49-60. [See section, "My Last Meeting with Gilbert", Grand Canyon noted, pp. 57, 58. Editorial (item not signed).] [The *Pan-American Geologist* begins with volume 37. It is intimated to be a revival of the *American Geologist*, but is a new journal created by Keyes, continuing the volume enumeration of *American Geologist*, which ceased as such in 1905.]

[91] *NOTE* regarding *Ancient Landscapes of the Grand Canyon Region* (McKee, 1931-1985): *Editions and variants of this title are cited separately herein.* Many later so-called "editions" are reprintings, others are revisions; some are cover variants (maintaining title and subtitle variation from title-page); some have different printer's credits in later years. Title-page credit for illustrators varies between editions. *Bibliographical information about variants, with special reference to points, appears in* Appendix IV to this bibliography. The last edition seen for the present bibliography is the 30th (1985), though a 2020 rough reprint from India is also cited herein. This booklet holds the third-longest record for a Grand Canyon-Colorado River title *continuously in print*, at least 54 years, 1931-1985. (See also note by Patraw, 1931, ITEM NO. 21.7211.)

PART 21. GEOLOGY AND PALEONTOLOGY OF THE GRAND CANYON REGION

IN PART 21 ITEM NUMBERS IN *ITALICS* IDENTIFY CREATIONIST WORKS AND CRITICAL PERSPECTIVES ON CREATIONIST THEMES

Rudner, Ruth

2020	21.8017	Don't take it for granite. Bright Angel Shale, Coconino Sandstone, Kaibab Limestone . . . for decades, geologists have been studying the rocks and the many formations that make up the Grand Canyon. It's been well documented, which is why the "recent" discovery of a new formation—a fossil-rich conglomeration of sandstone and limestone, but not granite—was such big news in the basement of the science building. *Arizona Highways*, 96(1) (January): 40-44. [George Billingsley's discovery of the Surprise Canyon Formation.] [Ellipsis is part of the subtitle.]

Rudolph, E.

1895	21.4983	Die Fortschritte der Geophysik der Erdrinde. *Geographisches Jahrbuch*, 18: 353-472. [Grand Canyon, p. 380. Brief note of work by Charles D. Walcott.] [In German.]

Savage-Landor, A. Henry

1913 21.8312 *Across unknown South America.* London, New York, and Toronto: Hodder and Stoughton, 2 volumes. [See in Vol. I the author's Preface (pp. v-xiii), which embarks on a lengthy "explanation" (pp. ix-xi) of global tectonics that must have been inspired by Alfred Wegener's then just-published (1912) treatise on the theory of continental drift—"One has only to look at any map of the entire world to see what really happened to the earth in days long gone by" (p. ix), and "It is easy, by looking intelligently at a map, to reconstruct the former shape of the world. You will notice that the most western portion of Africa fits exactly into the gap between North and South America . . . [etc.]" (p. x). But there the inspiration ceases. "Here is what really happened," he begins. "The earth at one period changed its shape—when, is merely guesswork, and is of no consequence here—and the crust of the earth—not the core, mind you—split into two great gaps from Pole to Pole, with a number of other minor fissures." (p. xi) "Such immense rivers as the Amazon, and its portentous tributaries flowing from south to north, were also formed perhaps at that time, great fissures caused by the sudden splitting and cooling of the earth's crust becoming river beds. So perhaps was formed the giant cañon of Colorado and the immense fissures in the earth's crust that occur in Central Asia, in Central Afria, and, as we shall see, on the central plateau of Brazil." (pp. x-xi).

Schuster, Rudolph

2023 21.8468 Agency information collection activities; science communication strategies related to mining activities. *Federal Register*, 88(206) (October 26): 73615-73616. [Request for comment. "*Abstract:* The USGS has a history of conducting research on uranium-bearing breccia pipe deposits to address data gaps related to the potential effects of uranium exploration and mining activities in the Grand Canyon watershed, its people, wildlife, and water resources. The USGS also recognizes a need to constantly update methods for communicating science to partners and non-scientists. The project proposed herein seeks to identify a path toward efficiently providing data and results to decision makers, stakeholders, partners, and the public to maximize the utility of science products. This research will advance USGS capability by documenting the efficacy of existing mining-related science communication efforts to partners and will advance USGS knowledge and use of communication methods to deliver actionable science to non-science audiences in the future. Information will be collected via semi-structured interviews conducted in person with members of the general public in the Grand Canyon watershed."]

Scott, W. A.

1921 21.5875 Asbestos industry on Pacific coast. *Engineering World*, 18(3) (March): 173-175. [See p. 174: "The earliest discoveries of asbestos in Arizona were in the Grand canyon of the Colorado river. It occurs there in a serpentine gangue within limestone. The deposits outcrop on both sides of the canyon, near Grand View, at a level of about 4000 ft. below the rim of the canyon, and 1000 ft. above the bed of the stream. However, the cost of operating in that locality has been excessive, and production is limited." (ENTIRE NOTE)] [*NOTE*: The geographical description of the locale seems to confuse the Hance asbestos works on the north and the Grandview copper mine on the south.]
